

COR7 in Action

Your Guide to Process Order Confirmation

HOW TO USE THIS GUIDE

This training guide is designed to support users with varying levels of experience in SAP.

Whether you are new to the system or an advanced user, the guide provides structured information to help you navigate and utilize the relevant SAP transaction effectively.

Here's how to make the most of this guide:

- **For Beginners:**
 - **Start with the Basics:** Begin with introductory sections that explain the purpose and functionality of the transaction, as well as navigation tips.
 - **Hands-On Practice:** Use practical examples and scenarios to apply your learning in a test environment.
 - **Focus on Troubleshooting:** Pay attention to the common mistakes and troubleshooting section to avoid typical errors and build confidence.
- **For Advanced Users:**
 - **Go Straight to Advanced Features:** Focus on sections that provide in-depth details about specific tools, data interpretation, and cross-functional integration.
 - **Efficiency Tips:** Leverage the best practices and tips section to refine workflows and improve system efficiency.
 - **Quick Reference:** Use transaction steps as a checklist or reference guide for navigating the system quickly and accurately.
- **General Tips for All Users:**
 - **Use the Guide Modularly:** The guide is structured to allow you to skip sections or dive deeper into specific topics based on your learning needs.
 - **Leverage Tools and Features:** Familiarize yourself with tools like search filters, linked documents, and logs to maximize your productivity.
 - **Integrate Knowledge Across Modules:** Explore how the transaction integrates with other SAP modules for end-to-end process visibility.
 - **Focus on Outcomes:** Regularly refer to the expected outcomes section to ensure you are achieving the intended objectives.

This guide is flexible and provides both foundational knowledge and advanced insights, making it useful for a wide range of SAP users and business scenarios.

1. Audience

This guide is designed for production planners, manufacturing operators, and quality control personnel in Solenis. It is ideal for individuals responsible for recording production progress, managing material consumption, and ensuring compliance with operational standards in SAP.

2. Objective / Purpose

By the end of this training, participants should be able to learn how to effectively use the COR7 (**Process Order Confirmation**) transaction in SAP.

- **Objective:**
The objective of this guide is to provide a comprehensive understanding of the COR7 transaction and its role in the process order confirmation workflow.
- **Purpose:**
 - The purpose is to ensure employees can efficiently:
 - Confirm process orders.
 - Record material consumption, yield, and labor times.
 - Address errors and ensure production data integrity.

3. Prerequisites

To benefit from this guide, ensure the following are in place:

- Access to SAP with the necessary authorization for COR7.
- A created and released process order (via COR1 and COR2).
- Properly maintained Bill of Materials (BOM) and Routing for the product.

4. Introduction to the COR7 Transaction

Overview of COR7 in SAP

COR7 is an SAP transaction code used to **Confirm Process Orders** in manufacturing.

Importance in Production, Inventory and Traceability

COR7 enables users to record actual production results, such as quantities produced (yield), materials consumed, labor / machine times, and scrap. This transaction updates inventory, tracks production performance, and ensures traceability in compliance-driven industries like chemical manufacturing.

5. Navigating the COR7 Screen

1. Accessing COR7:

Access COR7 through **Logistics > Production > Process > Confirmation > Enter**, or by entering **COR7** in the SAP command field.

2. Key Screen Elements & Selection Screen Overview:

- a. **Process Order Number**: Identifies the production order to confirm.
- b. **Goods Movement Tab**: Lists materials consumed or required adjustments.

3. Customizing the Display & Output Screen Overview:

- a. **Operations Tab**: Displays production steps and planned data.
- b. **Activities Tab**: Used to capture labor and machine times.

6. Understanding Process Order Confirmation

The **Goods Movement Tab** displays all the raw materials and components required for production as per the BOM. Key details include:

- **Material Number**: Identifies the material used.
- **Planned Quantity**: Predicted material consumption.
- **Actual Quantity**: Adjusted for real consumption during production.
- **Movement Type**: Determines if materials are consumed or returned (e.g., 261 for goods issue).

7. COR7 Process Flow

Enter the **Process Order Number** to load the order details.

Confirm actual production quantities, including yield and scrap.

Record labor and machine time for each operation.

Adjust material consumption if actual usage differs from the planned BOM.

Save the confirmation to update SAP records.

8. Practical Scenarios in COR7

Scenario 1: Standard Confirmation

- A batch of 1,000 liters of a chemical compound is produced.
- Yield: 1,000 liters; Scrap: 10 liters.
- Adjust raw materials to reflect actual usage.

Scenario 2: Handling Deviations

Unplanned material (e.g., cleaning agent) is consumed.

Add the material in the Goods Movement tab with the correct movement type.

9. COR7 Tools and Features

- **COGI**: Correct goods movement errors in confirmations.
- **COR6N**: Adjust or reverse process order confirmations.
- **CO03**: Display confirmed process orders.
- **COOIS**: Order Information System for tracking and reporting.

10. Best Practices and Tips for Using COR7

1. Always cross-check planned and actual quantities before saving.
2. Use batch management for accurate tracking in regulated environments.
3. Monitor error logs in **COGI** regularly to address issues promptly.
4. Record data immediately after production to avoid inconsistencies.

11. Transaction Steps

SAP* Easy Access

1. Select Logistics >> Production >> MRP >> Planned Order >> Convert to Process Order >> COR7 - Individual Conversion OR enter 'COR7' in the **Command line** text field.
2. Press **ENTER**.

Create Process Order: Initial Screen

3. Enter the **Planned order** field.
4. Click the **Enter**  button.

Note: After selecting the planned order and executing, a process order is created. Process order values can be changed prior to saving.

Information

5. A message appears at the bottom of the screen:  All checked materials in order are available

Create Process Order: Header - General Data

6. Click the **Save**  button.

Note: The process order number is displayed in a message at the bottom of the screen.

 Process order 2974128 created

You will need to release the process order. Refer to transaction Release a Collective Process Order (COR5).

12. Expected Outcome

By following this guide to complete the COR7 process:

- Process order is confirmed, updating inventory and production cost records.
- Accurate tracking of material consumption and labor time is enabled.
- Production yield, scrap, and deviations are documented for compliance.

13. Common Mistakes and Troubleshooting

1. **Mistake: Incorrect Material Quantities**
Solution: Use **COR6N** to correct or reverse confirmations.
2. **Mistake: Missing Goods Movements**
Solution: Resolve in **COGI** to fix errors in material postings.
3. **Mistake: Posting Period Closed**
Solution: Contact authorized personnel to open the required posting period in **MMPV**.
4. **Mistake: Yield Mismatches**
Solution: Verify routing and operation details before confirming.

14. Conclusion

By following this comprehensive guide, users can confidently perform process order confirmations in SAP COR7, contributing to efficient production management and compliance.
